Listing of the Claims:

- 1-33. (canceled)
- 34. (presently amended) A method to identify a specific binding partner compound of a phosphodiesterase polypeptide encoded by a polynucleotide selected from the group consisting of:
- i) a polynucleotide encoding the polypeptide comprising the amino acid sequence set forth in SEQ ID NO: 2; and comprising the sequence set forth in SEQ ID NO: 1;
- ii) a polynucleotide encoding the polypeptide comprising an amino acid sequence selected from the group consisting of SEQ ID NO: 2, SEQ ID NO: 19, SEQ ID NO: 21, SEQ ID NO: 23; and
- iii) ii) a polynucleotide that hybridizes under moderately stringent conditions to the non-coding strand of the polynucleotide of (i) or (ii); said moderately stringent conditions comprising a final wash at 65° C in 2X SSC and 0.1%SDS, said method comprising the steps of:
- a) contacting the phosphodiesterase polypeptide with a compound under conditions which permit binding between the compound and the phosphodiesterase polypeptide;
 - b) detecting binding of the compound to the phosphodiesterase polypeptide; and
- c) identifying the compound as a specific binding partner of the phosphodiesterase polypeptide.
- 35. (previously presented) The method according to claim 34 wherein the specific binding partner modulates activity of the phosphodiesterase polypeptide.
- 36. (previously presented) The method according to claim 35 wherein the compound inhibits activity of the phosphodiesterase polypeptide.
- 37. (previously presented) The method according to claim 35 wherein the compound enhances activity of the phosphodiesterase polypeptide.
